A lithium battery, like a 200Ah LiFePO4 lithium battery, connects to the device through its terminals. Positive and negative terminals link to their counterparts in the device. Hence, terminal maintenance is crucial. Applying white lithium grease on battery terminals will aid in this upkeep. It reduces corrosion and promotes a robust connection.

Calculation method of lithium ion battery internal resistance. According to the physical formula $R=U/I$, the test equipment makes the lithium ion battery in a short time (generally 2-3 seconds) to force through a large stable DC current (generally use 40A ~ 80A large current), measure the voltage at both ends of the lithium ion battery at this time, and calculate the lithium ion battery ...

The Eon Power+ is a 72V 32ah battery to plug and play into the stock battery tray. It fits with slight latch modifications and will work with stock controller settings on 60V bikes.
