What are charging piles for new energy vehicles?

As one of the new infrastructures, charging piles for new energy vehicles are different from the traditional charging piles. The “new” here means new digital technology which is an organic integration between charging piles and communication, cloud computing, intelligent power grid and IoV technology.

Why are charging piles important?

Charging piles are of great significance to developing new energy vehicles, and they are also an important part of the emerging digital economy such as intelligent traffic and intelligent energy. The State Grid Corporation of China (SGCC) is taking an active role in the development of new energy vehicles.

What is a charging pile gateway?

The gateways meet the demand of all charging pile communication scenarios and collect real-time electricity consumption information of charging piles so as to realize information interaction on charging and discharging between the power grid and charging piles, as well as meet the demand on charging service expansion.

What are the different types of charging piles?

Charging piles are mainly divided into AC charging piles and DC charging piles. AC charging piles have a smaller body, are flexible for installation, and typically take 6-8 hours to fully charge. They are suitable for small electric vehicles and are commonly used in public parking lots, large shopping centers, and community garages.

What are the charging pile instructions?

Instructions for Charging Pile-V1.3.0: Power Output Mode: Can be switched between intelligent mode and priority mode. In intelligent mode, the charging pile power is equally distributed between the two vehicle connectors.

What is a charging pile service system?

O&M: The charging pile service system is large in scale and complicated in organization. H3C uses its unified O&M software to provide users with a panoramic O&M solution that helps users extend to service applications upward and cover special charging and transforming devices downward.
