

Advantages and disadvantages of magnetic levitation flywheel energy storage

Can magnetic forces stably levitate a flywheel rotor?

Moreover, the force modeling of the magnetic levitation system, including the axial thrust-force permanent magnet bearing (PMB) and the active magnetic bearing (AMB), is conducted, and results indicate that the magnetic forces could stably levitate flywheel (FW) rotor.

How to control a magnetic levitation system?

In order to complete accurate control of the magnetic levitation system, the data acquisition (DAQ) board can collect the displacement variations of the FW rotor on five DoFs, and then the main control system developed on a DSP chip and an FPGA chip can finish the signal processing and code programming.

Can a magnetic levitation system levitate a Fw rotor?

Moreover, the magnetic levitation system, including an axial thrust-force PMB, an axial AMB, and two radial AMB units, could levitate the FW rotor to avoid friction, so the maintenance loss and the vibration displacement of the FW rotor are both mitigated.

How does a flywheel save kinetic energy?

Flywheel (FW) saves the kinetic energy in a high-speed rotational diskconnected to the shaft of an electric machine and regenerates the stored energy in the network when it is necessary. First use of FW regurgitates to the primitives who had applied it to make fire and later, FWs have been used for mechanical energy storage.

Can a small superconducting maglev flywheel energy storage device be used?

Boeing has developed a 5 kW h/3 kW small superconducting maglev flywheel energy storage test device. SMB is used to suspend the 600 kg rotor of the 5 kWh/250 kW FESS, but its stability is insufficient in the experiment, and damping needs to be increased .

Can passive magnetic bearing provide stable magnetic levitation in all directions?

In the proposed structure, the passive magnetic bearing cannot provide stable magnetic levitation in all directions, but the dynamic stability of the flywheel can be maintained by using AMB in the axial direction. Zhang WY et al. proposed an improved centripetal force type magnetic bearing (CFT-MB).
