

Backup battery not supplying power

Why is my back-ups battery not working?

Solution: Now that the Back-UPS product is operating on battery power, plug it's power cord into the wall. If the On battery indication does not go away then you will need to either desensitize the Back-UPS product or get an electrician to come in and correct the issue with the outlet.

What to do if a battery backup won't work?

If the backup has refused to work, you can take more direct measures, which include the following: 1). Look for the button that allows you to reset the circuit breaker. In some cases, this is enough to fix the battery backup. 2). Open the battery backup and look for the fuse.

Why is my backup battery not charging?

If the backup is not charging, the battery is probably dead. If you trust the battery, check the power source. You may have a faulty wall outlet. If the outlet is fine, check the charging cord. Use it on another backup (if you have one) to ensure that it is still working.

Why do I need a battery backup?

6). Dust can clog the filters, resulting in overheating. One solution is to inspect and unclog the filters regularly. Battery backups are supposed to keep your devices going whenever the power from the grid becomes unstable and unreliable.

What happens if a battery backup goes unused?

Charging and depleting the battery will cause it to deteriorate. However, allowing the backup to go unused for long periods will also cause it to deteriorate. The chemicals in the battery will eventually deplete. How Long Does Battery Backup Last?

How do I know if my back-ups unit has a battery?

If the Led does not come on then Hold the on power button in until you here a long beep and let it got before the beep finishes (usually about 4 seconds). When the unit is started off its battery it will indicate it is the wall battery to power the unit. (This indication may vary depending on which Back-UPS product is being used.

Possible loss of utility power, exhausted internal battery, disconnected battery or product issue due to internal component. Below are the steps to follow. 1. Turn the unit off. 2. Unplug unit from wall outlet. 3. Open battery compartment and disconnect battery. Both leads. 4. Remove battery from compartment and wait 20 seconds. 5.

Some common UPS problems you'll likely troubleshoot are a lack of output from the battery, a battery that doesn't charge, a battery that discharges despite being plugged into a wall socket, and continuous beeping. Typical troubleshooting steps include checking for incoming power and replacing an old or faulty battery

Backup battery not supplying power
