Automatic battery condition test function (whether to be restored or not - by "CONDITION TEST" mode). By using it, most batteries will be assorted for targeting ones to be regenerated with our new RPT-T300 if they do not have any cell cut or short and internal cell's damage (corrosion).

A battery test can best be done at the current that is drawn during normal operation. That results in a battery time that is comparable to the usage time. It is possible to speed-up the test by increasing the test current. However, care must be taken not to exceed the maximum allowable current for the battery under test. Normal values are:
