1st picture is my car's fuse panel layout. Does it seem like fuse #15 is the best option with 20A? Or which fuse would you recommend instead? 2nd picture is the Blackvue B-124X external battery's specs. I'm using this battery pack to power the BlackVue DR750-2CH LTE. Also, the fuses are...

Instead of connecting my power wire to the positive battery post, can I connect it to the fuse box? You can see in my pictures the main positive wire comes off the battery and splits, one routes else where and the routes to the fuse box. There is minimal room at the battery post, so it may be easier here at the fuse box. I just wasn't

The wiring layout described above (if i described it correctly) has been working fine when I used a 12v bench power supply, a different 12v 6ah battery, and a 20v tool battery connected via a power adapter. When I connect the 12v 18ah battery, both 10amp fuses (1 inline right after clamps and 1 in the fuse block) blow immediately. The switch to ...

Hi all I'm getting different info all over. Regarding the fuse disconnect between the battery and inverter. To my understanding it is there to protect the cable, but in the event that the inverter (Quattro 10kVA) can surge to 20kVA - 400A and the battery can handle this, surely the fuse to use is 400A.
