How to fix a broken ebike battery?

Step 1: To fix a broken ebike battery, you will need to take the battery pack out of its hard protective casing so that you can get to the cell groups. Step 2: Make sure there are no cracks in the conductor and no burn marks on the cells. Also, make sure there is no liquid coming from anywhere.

Can a remanufactured battery pack be sold as a product?

The EU Parliament's first ever directive on electric vehicle batteries states that a remanufactured battery pack can be sold as a remanufactured product, so long as the remanufacturing process has brought the state of health back to a minimum of a 90% threshold.

How long does a battery pack last?

It's these charge and discharge cycles that wear the battery the most. A battery pack is only good for so many cycles. Typical cobalt-based lithium-ion battery packs will last anywhere between 500 to 1200 cycles depending on the configuration and application. This usually comes out to 3 to 5 years in most use cases.

How do I get a new battery pack?

The simplest solution is to visit the equipment manufacturer's website to see if a replacement battery pack is available. Sometimes there isn't and, when there is, the prices can come as a shock. In my case, the equipment worked just fine and looked to have a good few more years of life in it -- a new battery would suffice.
