Can battery energy storage technology be applied to EV charging piles?

In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated charging, discharging, and storage; Multisim software is used to build an EV charging model in order to simulate the charge control guidance module.

Fortunately, with the support of coordinated charging and discharging strategy [14], EVs can interact with the grid [15] by aggregators and smart two-way chargers in free time [16] due to the rapid response characteristic and long periods of idle in its life cycle [17, 18], which is the concept of vehicle to grid (V2G) [19]. The basic principle is to control EVs to charge ...

The MHHHO algorithm optimizes the charging pile's discharge power and discharge time, as well as the energy storage's charging and discharging rates and times, to maximize the charging pile's revenue and minimize the user's charging costs.
