

China Solar Street Light Transformation Program

How solar street lights work in China?

Solar road lights are installed in more than 400 villages in China in first 2 years (2010-2012) Solar driven LED street lighting provides high-quality, cost-efficient lighting using sunlight instead of conventional electricity. During the day a solar panel converts solar energy into electrical energy that is stored in a battery.

Why did Philips Lighting participate in the Guiyang project?

Philips Lighting participated in the Guiyang project which is part of the Solar LED Lighting 1000 Villages Program - an initiative launched by The Climate Group and the One Foundation - and provided rural communities in China with solar powered LED street lighting.

How does solar LED street lighting work?

Solar driven LED street lighting provides high-quality, cost-efficient lighting using sunlight instead of conventional electricity. During the day a solar panel converts solar energy into electrical energy that is stored in a battery. When night falls, the battery discharges, releasing enough power for the LED luminaire to light the road.

How does a solar panel light a road?

During the day a solar panel converts solar energy into electrical energy that is stored in a battery. When night falls, the battery discharges, releasing enough power for the LED luminaire to light the road. As this lighting solution does not consume any conventional energy, its carbon emissions during use are zero.
