

# China cuts prices on solar panels

How much does a solar panel cost in China?

That's more than 60% below the US price of 40 cents per watt, according to the report. A year ago, Chinese panels cost 26 cents per watt. China's price plunge gives manufacturers there an enormous advantage over rivals in places like the United States and Europe.

Why are Chinese solar panels so expensive?

A year ago, Chinese panels cost 26 cents per watt. China's price plunge gives manufacturers there an enormous advantage over rivals in places like the United States and Europe. US producers have been increasingly concerned by the wave of new factories in China, which could make their own uneconomical.

Why did solar panel prices drop in China in December?

Module prices in China slid to a record low in December as manufacturers in the country rushed to clear their inventories amid a seasonal lull, PV magazine reported last week. Solar panel demand tends to drop off during the winter months in the country.

What happened to solar panels in China?

Solar companies cut costs and prices sharply to maintain market share. That led to a few low-cost survivors while many other competitors were driven out of business in China and around the world. The deserted blue-walled factory of Hunan Sunzone, left, which once made solar panels in Changsha, China.

Why are China's solar companies undercutting each other?

China's world-dominating solar firms have been forced to sell below cost after a breakneck buildup in capacity to feed China's renewables boom. Companies are undercutting each other to maintain market share, and most are expected to report losses this year, BloombergNEF said in a report earlier this month.

How will lower solar costs affect China's PV industry in 2023?

For one thing, silicon materials will not be a bottleneck restricting demand, and the first impact of the lower upstream costs is an increase in production of the downstream solar panels and components. Lower production costs will likely give a boost to both local and foreign demand in China's PV industry in 2023.

14 ????&#0183; Once prices rise enough to restore profitability, many idle factories are likely to ...

The supply glut in China has driven down module prices globally, improving the cost economics for Indian developers who saw the average cost of large-scale solar projects going down by 25 percent ...

China's world-leading solar makers have suffered huge losses as overcapacity and a price war forced many to sell panels below the cost of production. That's led to bankruptcies and mergers as smaller players are squeezed.
