Why are Chinese solar panel manufacturers seeking a government intervention?

REUTERS/Stringer/File Photo Purchase Licensing Rights SHANGHAI, June 12 (Reuters) - Chinese solar panel manufacturers said they are seeking immediate government intervention to curb investment and industry collaboration to arrest a plunge in prices of solar cells and modules, as the industry faces overcapacity.

Why are China's solar companies undercutting each other?

China's world-dominating solar firms have been forced to sell below cost after a breakneck buildup in capacity to feed China's renewables boom. Companies are undercutting each other to maintain market share, and most are expected to report losses this year, BloombergNEF said in a report earlier this month.

Will China start a recycling system for retired solar PV panels?

Credit: EDP China has announced a plan to establish a recycling system for retired solar PV panels. In an announcement by the National Development and Reform Commission, China is targeting to build up a mechanism for disposing of decommissioned equipment in solar PV plants by 2025.

Will China become the world's largest solar panel manufacturer?

Financial incentives and a government push have helped China become the solar panel factory of the world, accounting for about 80% of global module capacity. Analysts expect Chinese manufacturers to add up to 600 gigawatts (GW) this year, enough to meet global demand through 2032.

Can China dispose of decommissioned solar PV equipment by 2025?

In an announcement by the National Development and Reform Commission, China is targeting to build up a mechanism for disposing of decommissioned equipment in solar PV plants by 2025. It is also aiming to improve relevant standards and specifications for the recycling of decommissioned solar PV and wind power equipment.

What's going on with solar panels in China?

Semafor Signals: Global insights on today's biggest stories. A price war on solar panels in China has meant that big firms have rapidly lost profit while small firms risk bankruptcy. Historically, the industry has been propped up by city governments, which build solar panel factories to lease or sell to private firms.

The average solar panel for a home will have 60 or 72 cells, while a commercial solar panel will have 96 cells or more. Advertisement **THIS IS AN ADVERTISEMENT AND NOT EDITORIAL CONTENT.**

In May, the US Commerce Department opened an investigation into solar cells and panels made in Vietnam, Thailand, Malaysia, and Cambodia over allegations of state subsidies from China. Chinese manufacturers responded by announcing new manufacturing capacity in Indonesia.
