

# Condensed state battery new energy vehicle

What is a condensed state battery?

Some experts say that the core of the condensed state battery is the ability to achieve a superfluid state, superconducting state, stability, and superior conduction. In short, these batteries are more stable, with greater capacity and faster conduction efficiency.

Will a condensed battery be available in electric vehicles?

The Condensed Battery will also be available for use in electric vehicles and will have mass production capability within this year, Wu said. CATL initially said at the Chongqing auto show in late June last year that the company was developing Condensed Battery, in addition to solid-state and semi-solid-state batteries.

Is CATL launching a new condensed battery?

During the Shanghai Auto Show, CATL launched a new condensed battery that delivers the proper safety and energy density to enable the flight of electric passenger planes. If this technology sounds like it's still several years away, think again - CATL expects to begin mass production sooner than you'd think.

What is a 'condensed matter' battery?

The Chinese battery giant considers it suitable for electric aircraft but also envisions use in road vehicles, with series production to start this year. Officially referred to as "Condensed Matter" battery, the new cells exhibit high safety and precisely that high energy density, as CATL's chief scientist Wu Kai stated at the trade show.

Can a condensed matter battery achieve mass production?

Chinese battery industry heavyweight CATL has unveiled a novel condensed matter battery technology with an energy density of up to 500 Wh/kg. The company said it can achieve mass production within this year. On April 19, CATL unveiled its condensed battery technology at Auto Shanghai.

What is Tesla's new condensed battery?

CATL is one of the biggest lithium-ion battery producers and one of the primary cell suppliers to Tesla. It is understood that the new condensed battery has an energy density of almost double that of Tesla's current battery cells.

Wu Kai, the chief scientist of Chinese battery giant CATL, revealed on August 28 at the 2022 World New Energy Vehicle Congress that the firm plans to launch a new-generation "condensed battery" next year. Condensed state batteries feature high safety, high reliability, and a good life cycle.

China's CATL has launched a new semi-solid state battery type, known as a "condensed battery", which is said to offer a 500 Wh/kg energy density while being safer than regular lithium ion batteries. CATL is one of the ...

# Condensed state battery new energy vehicle

China's CATL announced a new battery type at Auto Shanghai 2023. The so-called condensed battery is a semi-solid state battery that promises to offer a 500-Wh/kg ...

The battery technology leader shared details of its new condensed battery during a presentation at the Shanghai Auto Show today, showcasing that a single cell offers an energy density of up to 500 ...

The Chinese battery giant considers it suitable for electric aircraft but also envisions use in road vehicles, with series production to start this year. Officially referred to as "Condensed Matter" battery, the new cells exhibit ...

**Key Takeaways.** High Energy Density: 500 Wh/kg, double the density of Tesla's 4680 cells.; Innovative Anode Design: 3D honeycomb structure increases surface area and efficiency.; Advanced ...

CATL plans to launch condensed matter batteries, its next generation of battery cells, in 2023, the company's chief scientist Wu Kai said today at the World New Energy Vehicle Congress. Condensed cells have features including high safety, reliability and good cycle life, Wu said, without going into further detail.

During the Shanghai Auto Show, CATL launched a new condensed battery that delivers the proper safety and energy density to enable the flight of electric passenger planes.

From what we've heard the condensed matter semi-solid state battery will have energy density of 500 watt-hours per kilogram. Now this is considerably more than lithium-ion's current 300 watt-hours best. Clean ...

Wu Kai, the chief scientist of Chinese battery giant CATL, revealed on August 28 at the 2022 World New Energy Vehicle Congress that the firm plans to launch a new-generation "condensed battery" next year. ...

The key to this advancement lies in CATL's cutting-edge condensed-state battery technology, boasting an energy density of 500Wh/kg. This energy density is double that of current electric vehicle (EV) power batteries, which typically offer around 250Wh/kg and meet the strict energy requirements for regional aircraft.

Chinese battery giant CATL on Wednesday unveiled a new ultra-high energy battery technology initially slated for aviation, and with an automotive cell under development. The so-called "condensed matter" battery, ...

CATL, HGP team up on battery energy storage project. In late March, CATL signed an agreement with HGP, a USA-based battery energy storage project development company, for a 450MWh battery energy storage supply project, according to a post on CATL's WeChat account. CATL's subsidiary, Maritime Silk Road Highway ally on battery swap project

# Condensed state battery new energy vehicle

China's CATL has launched a new semi-solid state battery type, known as a "condensed battery", which is said to offer a 500 Wh/kg energy density while being safer than regular lithium ion batteries. CATL is one of the biggest lithium-ion battery producers and one of the primary cell suppliers to Tesla.

The battery giant's chief scientist, Wu Kai, who spoke to reports at the Shanghai auto show, said the battery could supply enough energy to power electric passenger aircraft for civil aviation use. The battery is a type of semi-solid state product with condensed electrolyte and new anode and separator materials. It would have an energy ...

The Chinese battery giant considers it suitable for electric aircraft but also envisions use in road vehicles, with series production to start this year. Officially referred to as "Condensed Matter" battery, the new cells exhibit high safety and precisely that high energy density, as CATL's chief scientist Wu Kai stated at the trade show ...
