

# Considerations when buying home solar panels

What factors should you consider when buying solar panels?

Since your panels will be exposed to the elements, durability is another factor that you should take into account. Panels that easily break must be avoided since system downtime will take a huge hit on your savings. When negotiating with solar companies, it's best to inquire about the long-term durability of their panels.

Should you sell a home with solar panels?

Some homeowners opt to take advantage of selling a home with solar panels, as this increases the value of the home and can be a selling point for many buyers. For those who leased the solar panels, simply call the company to have them transferred to a new location, the new homeowners, or cancel the plan altogether.

Should you buy or lease solar panels?

Yes. Some homeowners opt to lease the solar panel system rather than purchasing it. They pay a monthly fee for the energy generated, which can be significantly lower than the fees paid to your local utility company. When you lease solar panels, the solar company owns the actual panels and system.

Are solar panels a good investment?

This will ensure that your solar batteries charge fast and produce enough electricity whenever you need it. To help shortlist your options, it's important to know that the average panel efficiency is around 15%-22%. With this in mind, panels within this range or even higher will prove to be a worthy investment. 3. Panel size

How do I choose a solar panel for my home?

Homes with south, southeast, and southwest facing roofs are among the best candidates for solar panels. Finally, homeowners should consider the amount of shade near their roof and how that may impact the amount of sunlight hitting a panel. Factors like trees, neighboring homes, and other tall objects can impact the amount of sun your roof gets.

Do solar panels need a lot of space?

While the roof of your house may have a lot of space, you should still consider getting the right solar panel size for you when looking for options. As panels generate more energy per square meter, they require ample overall space. This can help you plan your whole configuration setup. 4. Roof compatibility and mounting

Buying used solar panels can be worth it for DIY home solar projects or adding capacity to existing arrays. The key benefits are lower costs compared to new panels, often 50% less. New models naturally come with a price tag at least double the cost of used ones. Even with the reducing cost of new solar panels each year, it still can't beat that of used panels. ...

What to Look for When Buying Solar Panels. To help you make the switch, our guide will discuss the things
