

# Electrolytic capacitor general distributor

Where can I buy aluminum electrolytic capacitors?

Please try again. Aluminum Electrolytic Capacitors are available at Mouser Electronics from industry leading manufacturers. Mouser is an authorized distributor for many aluminum electrolytic capacitor manufacturers including Chemi-Con, Cornell Dubilier, KEMET, Nichicon, Panasonic, TDK, Vishay & more.

What is an electrolytic capacitor?

An electrolytic capacitor is a type of capacitor that uses an electrolyte to accomplish a higher capacitance than other types of capacitors. An electrolyte is a liquid or gel containing a high concentration of ions.

What is polarized aluminum electrolytic capacitor?

Polarized aluminum electrolytic capacitors have an anode electrode (+) made of pure aluminum foil, electrolyte that acts as the cathode, and a thin insulating layer of aluminum oxide that acts as the dielectric. Electrolytic capacitors have higher capacitance-voltage (CV) product per unit volume than ceramic capacitors or film capacitors.

What are the uses of aluminum electrolytic capacitors?

Aluminum electrolytic capacitors have uses in energy storage and AC resistance. They are the most inexpensive type of capacitor with the widest range of sizes, capacitance, and voltage range as compared to other capacitor dielectrics.

Are electrolytic capacitors polarized?

An electrolyte is a liquid or gel containing a high concentration of ions. Almost all electrolytic capacitors are polarized, which means that the voltage on the positive terminal must always be greater than the voltage on the negative terminal.

Are axial electrolytic capacitors polarized?

Aluminum Electrolytic Capacitors, including axial versions, do contain polarized parts. They consist of aluminum foil, electrolytic paper, an aluminum oxide layer, and two terminals (a cathode and an anode). However, not all axial electrolytic capacitors are polarized.

An electrolytic capacitor is a type of polarized capacitor that uses a wet electrolytic solution and an oxide film to store electrical charge. An example is the aluminum electrolytic capacitor which contains two closely spaced spooled strips of aluminum foil for the positive anode and negative cathode. These are separated by a thin spacer material soaked in the wet electrolyte. The thin ...
