How do I connect my energy storage system?

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.

Why do we need special connection technology for battery storage systems?

Special connection technology optimized for use in storage systems is required in order to connect these storage systems quickly, safely, and efficiently. Busbar connections and battery-pole connectors for battery storage systems are safe and cost-effective. Find out more here in the video.

How to connect a busbar to an energy storage system?

Connectors for connecting to the busbar simplify the installation of slide-in systems in energy storage systems. The connectors with reverse-polarity protection are plugged onto the rear side of a storage system and are suitable for system voltages up to 1,500 V.

Why should you use DC connectors for home storage applications?

The new connectors for home storage applications are especially suitable for use on battery inverters. DC connectors protected against polarity reversal prevent mismatching in common PV connection technology and battery-pole short-circuits. Energy storage systems enable the self-consumption of renewable energy regardless of when it is generated.

Are busbar connections and battery-pole connectors safe and cost-effective?

Busbar connections and battery-pole connectors for battery storage systems are safe and cost-effective. Find out more here in the video. Here you will see how you can install energy storage systems quickly and easily using battery-pole connectors and busbar connections from Phoenix Contact.

Why do we need energy storage systems?

Energy storage systems enable the self-consumption of renewable energy regardless of when it is generated. They therefore make a significant contribution to alleviating the load on power grids and support the integration of renewable energy into the power grid.

Energy storage connectors provide a safe, reliable and efficient connection between energy storage systems and other electrical devices. They are used in home storage system, solar power generation and wind turbines to transfer electricity from the battery to the power grid or vice versa.

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1500V and 350A with the single pole pluggable battery connectors. These connectors are available in different shell types: as straight plug, right angled plug, screw mounted receptacle, bulkhead mounted receptacle.
