AC charging piles are generally divided into 3.5kw, 7KW, 11kw, and 22KW specifications according to power. The more precise definition of the 7KW specification is 220V/32A/7kw, which is also the most common specification at present. Charging piles above 7kw require a 380V meter.

At the current stage, scholars have conducted extensive research on charging strategies for electric vehicles, exploring the integration of charging piles and load scheduling, and proposing various operational strategies to improve the power quality and economic level of regions [10,11].Reference [] points out that using electric vehicle charging to adjust loads can ...

Each charger pile (point) consists of 6 60kW fully SiC-based power converter modules. For isolated charger pile design, high-voltage and high-frequency capabilities of SiC MOSFETs can simplify topologies and controls significantly. The direct benefit is power density improvement and system cost reduction.
