What is a charger Pile (Point)?

Each charger pile (point) consists of 6 60kW fully SiC-based power converter modules. For isolated charger pile design, high-voltage and high-frequency capabilities of SiC MOSFETs can simplify topologies and controls significantly. The direct benefit is power density improvement and system cost reduction.

How many power converter modules are in a charger pile?

What MOSFETs do Charger pile modules use?

Currently, charger pile modules of the state of art design and in volume production almost all use 650V Si MOSFETs in order to get a decent power density and efficiency out. For a design with power over 6 kW, 3-phase input becomes necessary.
