

# Finland home energy storage power supply purchase price

What percentage of Finnish electricity is bought from power exchanges?

The share of electricity bought from the power exchange in relation to the Finnish electricity consumption has increased considerably since Finland joined the Nordic power market area in June 1998. The share of electricity procured from Nord Pool and EPEX SPOT power exchanges covered 79 per cent of the Finnish physical consumption in 2023.

How much does electricity cost in Finland?

Its minimum price was EUR 0.1149 kWh, corresponding to December of 2007. When looking at the difference between the price of electricity with and without taxes, we see that households in Finland paid EUR 0.0691 in taxes for each kilowatt hour, which means that 28.76% of what consumers pay for electricity is in concept taxes.

Does Finland have a power market?

Additionally, Finland is part of the Nord Pool, a regional power market that includes other Nordic countries and parts of Europe, and electricity prices in Finland can be affected by market conditions in the wider region.

How long does a DSO have to supply electricity in Finland?

Under section 102 §167; of the Finnish Electricity Market Act, DSOs are obligated to ensure electricity supply for consumers whose supplier stops supplying electricity for at least for a 3-week period.

Are electricity retailers in Finland fully ownership unbundled?

Only a few of the electricity retailers in Finland are fully ownership unbundled from electricity network activities. Though legally unbundled, most of the electricity retailers still belong to a same group of companies as a local distribution system operator or they are owned by one or several distribution system operators.

How much electricity did Finland export in 2023?

The highest hourly load of the year 2023, 13,300 MWh/h, was reached in November. During the peak load hour Finland exported electricity, which is exceptional. Exporting electricity was however possible because of relatively low peak consumption and high wind power production. Domestic electricity production was around 14,000 MWh/h at that hour.

Electricity prices in Finland are influenced by a variety of factors, including supply and demand dynamics, production costs, weather conditions, market regulation, and government policies. Finland has a highly diversified electricity production mix, which includes nuclear, hydro, wind, and biomass energy sources, among others.
