

Fire host battery replacement cycle

When should a fire alarm battery be replaced?

The average life of a battery used to keep a fire alarm system going in case of a power failure is 5 years. That means that half of the batteries are useless at the end of 5 years. Batteries should be replaced long before that. The NFPA Code indicates when to replace the batteries, but the NFPA Code only indicates the worst case scenario.

How often should a fire panel battery be replaced?

+ See the Fire Control Panel /PSU Batteries section below for available batteries. ? Note; if 72 hours battery standby is required, it is recommended that the battery is replaced every 3 years. Note: Fire Panel and associated PSU batteries used will vary according to system design.

How long do fire alarm batteries last?

As stated above the fire alarm batteries must be replaced with 4 - 5 years from date of manufacture. If you write the installation date on the batteries then you are not noting accurate information. The reason for this is that there is no telling how long those fire alarm batteries sat in your warehouse or even the manufacturer's warehouse.

How long does a firecell battery last?

Battery Information FireCell Equipment Type Typical Battery Life Batteries Required Part Number (s)
FireCell Control Panel/PSU Up to 5 years*As per system design+ Up to 5 years*? 1x 6V 4Ah FC-006-004
Callpoint Up to 5 years*6 x AA Alkaline cells... Page 10 The information contained within this literature is correct at time of publishing.

What if fire alarm batteries are not marked with the month/year?

10.6.10.1.1 When the fire alarm batteries are not marked with the month/year by the manufacturer, the installer shall obtain the date code and mark the batteries with month/year of battery manufacture. Make sure to join our Fire Alarms Online Facebook Group [HERE](#) .
