High nickel lithium-ion battery positive electrode material

Ni-rich $\text{LiNi}_{0.8}\text{Mn}_{0.1}\text{Co}_{0.1}\text{O}_2$ (NCM811) is one of the most promising electrode materials for Lithium-ion batteries (LIBs). However, its instability at potentials higher than 4.3 V hinders its use in LIBs. To overcome this barrier, we have prepared a core-shell material composed of a core of NCM811 (R-3m) and a monoclinic (C2/m) Li_2MnO_3 shell ...
