Can I install solar panels myself?

It is possible to install the panels yourself, if you purchase solar-panel installation 'kits', which may include panel providers sending a certified electrician to sign-off on regulatory paperwork and check your installation. Read also: French city's plan to encourage residents to invest in solar panels What can I do with surplus energy?

What is the best way to install solar?

The best way to install solar is through a qualified professional who holds a certification to do so and works with high-quality solar panels. The industry-standard certification is awarded through the North American Board of Certified Energy Practitioners (NABCEP). How can I avoid getting scammed while going solar?

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Can you buy a solar energy system with a mortgage?

New homeowners can add solar as part of their mortgage with loans available through the Federal Housing Administration Fannie Mae, which allow borrowers to include financing for home improvements in the home's purchase price. Buying a solar energy system makes you eligible for the Solar Investment Tax Credit, or ITC.

Should you install energy storage with a solar system?

Installing energy storage with a solar system can help utilize the power generated when it's needed most, regardless of whether it's sunny outside at the time. Storage allows you to save that energy and use it later in the day, like when you turn the heat on at night or run the dishwasher after dinner or even when the power goes out.

How many solar panels do I Need?

Energy usage dictates how many solar panels you'll need, and it can even determine if it's worth it to go solar at all. The more energy you use, the bigger the solar system you'll need to cover your consumption. Most home solar systems use between 15 and 19 solar panels, but the exact number needed is unique for each home.
