

How to adjust the thermostat of solar heating cable

How do you connect a thermostat to a heating cable?

Delivers power from the thermostat to the heating cable. Connect heating cable to terminals 1 and 4 on the back of the thermostat (fig. 2). The detachable cover on the back of the thermostat (fig. 1) is designed to prevent uninsulated ground wires from dropping onto the terminals after installation has been completed.

How do you adjust a thermostat?

The thermostat is adjustable from 60°C to 70°C. The thermostat is adjusted by turning the adjuster anticlockwise to decrease the temperature setting and clockwise to increase the temperature setting. Only adjust the temperature setting when the isolating switch is switched off at the switchboard.

How do I install a thermostat?

To install the sensor, refer to the installation guide of your heating floor. Cut off power supply on lead wires at the electrical panel in order to avoid any risk of electric shock. Ensure that the thermostat will be installed on a junction box located in an uninsulated wall.

How do you connect a thermostat to a power source?

A pair of wires (black) must be connected to the power source (120-208-240 VAC) and another pair (yellow) must be connected to the heating cable (refer to the drawings displayed on the back of the thermostat). For connections with aluminum wires, you must use CO/ALR connectors.

How do you insulate a Sunstat valve?

Extend the cold water line from the expansion control valve to the cold water inlet fitting on the Sunstat valve. The valve must be insulated with closed cell polymer insulation or similar (minimum thickness 9 mm) and the insulation installed so as not to impede the operation of the valve.

How do I connect a thermostat with aluminum wires?

For connections with aluminum wires, you must use CO/ALR connectors. Please note that thermostat wires do not have polarity, meaning that any wire can be connected to the other. Then, connect the wires of the floor temperature sensor at the indicated location behind the thermostat.
