How to choose wall-mounted solar panels?

Efficiency is a crucial consideration when choosing wall-mounted solar panels. Higher-efficiency panels convert more sunlight into electricity, maximizing energy production. Factors such as temperature coefficients and low-light performance also influence the panels' overall performance.

Can solar panels be mounted on a wall?

Roof-mounted solar panels are usually tilted at a 20-50 degree angle, which allows them to capture sunlight when the sun is high in the sky. But most wall-mounted panels are parallel to the wall, or only slightly tilted. It's also harder to fit as many solar panels on a wall as you would on a roof.

How efficient are wall-mounted solar panels?

The efficiency of wall-mounted solar panels varies depending on the type and quality of the panels. Monocrystalline panels are known for their high efficiency, while polycrystalline panels offer a cost-effective option with slightly lower efficiency. Thin-film panels are flexible but generally have lower efficiency.

How far from the wall can a solar panel be mounted?

Without projecting a panel beyond 200mm from the wall, from the wall, you can mount a typical panel with dimensions 170cm by 110cm at around 80°. A wall-mounted panel gives much better consistency and peaks in spring and autumn compared to the summer. Yearly production ~290kWh. There are multiple options for mounting panels on a wall.

How to install wall-mounted solar panels?

To maximise energy absorption, you need to make sure to install the wall-mounted systems strategically. You can do this by placing the solar panels directly parallel to the wall, tilting them away from the wall or overhanging them. The natural slope of wall-mounted solar panels requires special mounting hardware to ensure security.

Are wall-mounted solar panels a good option in winter?

The winter sun is relatively low in the UK, and energy usage typically increases during winter. Therefore, wall-mounted panels can be particularly beneficial here. Without projecting a panel beyond 200mm from the wall, from the wall, you can mount a typical panel with dimensions 170cm by 110cm at around 80°.
