Car battery guide Start by cleaning the tray and terminal clamps with a wire brush and battery guide terminal cleaner. Place the new battery into the tray and secure it with the hold-down or bracket. Connect the positive (red) ...

Not 100% sure. Whatever came with the RV (which itself initially only came with a single 12V deep-cycle lead-acid battery). Like I mentioned, I converted the single 12V lead-acid, to 4, 6V lead-acid in series/parallel. Just looked at an old pic from the RV, it looks like a WFCO-9855 "Power Converter". Interestingly, the blurb on their pages says:

Complete a Bulk & Absorption charge to bring the battery bank to 100% SOC before starting a corrective Equalization. 2. Measure the temperature of a test cell and record the specific gravity of each cell in the ...

Battery cable is insulated with flame retardant PVC and is resistant to fuel, oil, acid, and salt. It is the OEM standard in the industry. Like connectors, battery cable is color-coded for identification. This way it's easy to quickly identify gauge, connectors, and crimper needed. The generally accepted industry practice is to use black insulated cable for negative (ground) ...
