

# How to judge which battery is good or bad

How do you know if a battery is bad?

Hold the battery vertically 2-3 in (5.1-7.6 cm) above a hard, flat surface. As alkaline batteries go bad, zinc oxide builds up inside, making the battery bouncier. This simple drop test helps you determine new batteries from old ones. Start by taking the battery and holding it above a hard, flat surface like a metal table or marble countertop.

How do you know if a 9 volt battery is working?

Touch the red probe to the battery's positive terminal and the black probe to its negative terminal. You should have a working battery if the multimeter reading is close to the voltage written on the battery. However, if the reading is lower, it's probably dead. For more tips, including how to test a 9-volt battery, read on!

How do I know if my car battery is working?

Alternatively, use a multimeter to test your battery by turning the knob to 20 on the "DCV" or "V" side. Touch the red probe to the battery's positive terminal and the black probe to its negative terminal. You should have a working battery if the multimeter reading is close to the voltage written on the battery.

How do you know if a battery is positive or negative?

On AA, AAA, C, and D batteries, the negative terminal is the flat side and the positive side has a protrusion. On a 9v, the smaller, rounded terminal is positive and the larger, hexagon terminal is negative. Lithium batteries come in many shapes, so look for the markings on the battery to determine its positive and negative terminals.

How do I know if my car battery needs to be replaced?

Let's get started. A multimeter is the best way to test your car battery to see if it needs to be replaced. It gives you a picture of how your battery is performing electronically, but there are some things that you can look for that might also tell you that your battery needs to be replaced.

How do I know if my watch battery is good?

Use a multimeter set on DCV, place the red (positive) lead on the + side of the watch battery. Place the black (negative) lead on the other side of the coin. You are looking for a reading at 3v. If the reading is 3 the battery should be good. If not, replace it.
