

How to type solar energy in Wubi

What is Wubi & how does it work?

Location: Bay Area. (Previously: NYC; Beijing) So, I decided to learn Wubi. I know, I'm a masochist. Here's how: Introduction For those who don't know, Wubi is a method for typing Chinese characters. Basically, you enter characters by radical. Each letter on the keyboard is associated with a group of radicals, which are classified in a certain way.

Why should I use Wubi If I'm using Pinyin input?

If you're familiar with Pinyin Input, you know how obnoxious it can be to hunt for the correct number of the character you want to write. Because typing with Wubi specifies precisely the character you desire, typing is much faster.

How do you type Chinese characters in Wubi?

Here's how: Introduction For those who don't know, Wubi is a method for typing Chinese characters. Basically, you enter characters by radical. Each letter on the keyboard is associated with a group of radicals, which are classified in a certain way.

How do I learn Wubi?

The best way to learn Wubi is with a typing tutor program. Kingsoft make one as do a few others. A search of the forums will return a number of threads on the topic. 4 weeks later... So how is the learning going? I had thought about having a go at learning wubi, but it sounded horribly difficult. Most Chinese do not seem to know it.

Does Wubi have shortcuts?

WuBi contains a wealth of shortcuts for typing multiple characters with just a few keystrokes. As a language learner though, I'm constantly using tab completion to try to figure out how to type characters. Therefore, I wanted to remove all the shortcuts because they cluttered up the completions list.

How hard is Wubi compared to pinyin?

Unlike pinyin that you already know even before you learn characters (unless, say, you have Japanese background), Wubi requires dedicated time and effort to learn. Also, when you encounter it first, the learning curve seems quite steep.

Sunlight is necessary for solar energy generation, as the photons from the sun's rays interact with the solar cells which power solar panels. However, the solar industry is constantly evolving. Some specially designed solar panels have even been created to work at night, and research has found that existing panels could be modified to include new solar energy technologies in the future.
