What are the customer requirements for a battery energy storage system?

Any customer obligations required for the battery energy storage system to be installed/operated such as maintaining an internet connection for remote monitoring of system performance or ensuring unobstructed access to the battery energy storage system for emergency situations. A copy of the product brochure/data sheet.

What should be included in a battery energy storage quote?

Safety exclusion zone around battery energy storage system if required. Location of main switchboard. Any other existing NET on site. Quotation should indicate whether the battery energy storage system is portable for customers to relocate to a different location in the future.

How should battery energy storage system specifications be based on technical specifications?

Battery energy storage system specifications should be based on technical specification as stated in the manufacturer documentation. Compare site energy generation (if applicable), and energy usage patterns to show the impact of the battery energy storage system on customer energy usage. The impact may include but is not limited to:

How do I plan a battery energy storage system?

Conduct an analysis of the customer's current energy costs based on customer electricity bills. Depending on the purpose of the battery energy storage system, include a description of how the proposed battery energy storage system is expected to impact/change the customer energy usage and electricity costs.

How do I certify a battery energy storage system?

Provide a hardcopy and electronic copy of the battery energy storage system SDS. Provide a copy of NETCC consumer information guide. Provide customer with the name and licence/accreditation number of the tradesperson who designed/signed off on the installation.

Why should batteries be included in the current roadmap?
