In addition to the passive incorporation of grid electricity exhibiting reduced carbon intensity due to the gradual integration of renewable sources, the adoption of distributed systems driven by green power, such as distributed photovoltaic and energy storage (DPVES) systems, is becoming one of the promising choices [5, 6]. The implementation of DPVES, ...

Scenario characteristics: The ESS capacity is close to the PV capacity. ESSs are mainly used for maximum self-consumption and peak staggering as well as capacity control at the grid connection point. Independentmains is the first choice for the auxiliary power supply of ESSs, and the 400 V AC bus power supply is the second choice.
