Thicker wires can carry more current for longer distances. Without getting into the math behind it, the reason for this is that a cable's resistance increases as its diameter decreases or the length increases. Therefore, the size cable you need depends on two things: how much current you need to carry and how long your cable runs need to be.

Higher Current Requires Thicker Cables: The increased current in parallel-connected batteries demands thicker cables to handle the load, preventing overheating. More Complex Charging Process: Charging can be ...
