

Lithium sulfonyl chloride battery can be used as a power source

Are lithium-sulfur batteries the future of energy storage?

Lithium-sulfur (Li-S) batteries are the current focus of attention as candidates for next-generation energy storage systems due to their high energy density, low cost and environmental friendliness.

Can lithium-sulfur batteries have high energy?

(American Chemical Society) To realize lithium-sulfur (Li-S) batteries with high energy, it is crucial to maximize the loading level of sulfur cathode and minimize the electrolyte content. However, excessive amounts of lithium polysulfides (LiPSs) generated during the cycling limit the stable operation of Li-S batteries.

Do lithium-sulfur batteries use sulfur?

In this review, we describe the development trends of lithium-sulfur batteries (LiSBs) that use sulfur, which is an abundant non-metal and therefore suitable as an inexpensive cathode active material. The features of LiSBs are high weight energy density and low cost.

Why are lithium-sulfur batteries so popular?

A lithium-sulfur battery attracts much attention because of its high energy density due to the large theoretical capacity (1672 mAh g⁻¹) of sulfur active material (Marmorstein et al., 2000; Ji and Nazar, 2010). However, the Li/S batteries with a conventional liquid electrolyte suffer from rapid capacity fading on cycling.

What are the research focuses of lithium-sulfur battery?

Currently the research focuses of lithium-sulfur battery are to improve sulfur content of the positive pole, design a stable conduction structure for the sulfur positive pole, develop a new type electrolyte that is compatible with both sulfur pole and lithium metal, etc. Qingping Wu, ... Why is lithium polysulfide a problem in lithium-sulfur batteries?

The dissolution and shuttle effect of lithium polysulfide (LiPSs) are the main obstacles to the poor performance of lithium-sulfur batteries. Accelerating the transformation of LiPSs needs to be realized by a new multifunctional sulfur medium, which will become the direction of future research efforts.
