Why is battery storage important in a microgrid?

Battery storage is an important part of every microgrid. Battery storage works by absorbing electricity when it's abundant on the power grid and sending excess power back to the grid when it's most needed, such as during the evening after the sun sets and solar energy fades away. In standalone microgrids, the Battery Energy Storage System (BESS) is a popular energy storage technology. Because of renewable energy generation sources such as PV and Wind Turbine (WT), the output power of a microgrid varies greatly, which can reduce the BESS lifetime. Because the BESS has a limited lifespan and is the most expensive component in a microgrid, ...
