Purchasing industrial lead-acid batteries requires a substantial initial investment. These batteries are composed of heavy metals, particularly lead, which drives up their production costs. The size and capacity of the battery directly influence its price, making it a significant expense for businesses with large-scale power needs.

Lead-acid batteries rely primarily on lead and sulfuric acid to function and are one of the oldest batteries in existence. At its heart, the battery contains two types of plates: a lead dioxide (PbO₂) plate, which serves as the positive plate, and a pure lead (Pb) plate, which acts as the negative plate. With the plates being submerged
