

New Energy Adds Battery Pack Case

Are EV batteries a 'battle for the box'?

The "battle for the box" has kicked off a new wave of creativity among engineers and materials scientists. Roughly 80% of current EVs have an aluminum battery enclosure, but engineers are quick to note that the field is wide open for alternatives, based on vehicle type, duty cycles, volumes, and cost.

What is a structural battery pack in a Tesla Model Y?

The structural battery pack in Tesla's Model Y can be seen as an example of the cell-to-chassis philosophy because, as the name suggests, the pack is a key load bearing member of the vehicle's chassis, and it can be configured with or without modules.

What are the benefits of cell-to-pack construction of batteries?

The point of all these is to improve the ratio of energy to weight and volume at pack level, and reduce the number of components in the pack and the manufacturing costs. One major and immediate effect of moving to cell-to-pack construction of batteries is on the cells themselves.

Does aluminum make a good battery pack?

The larger the battery, the more aluminum makes sense for battery packs," Asfeth asserted. Bucking that trend is GM's 9000-lb. (4082-kg) Hummer EV, which uses a multi-material battery enclosure. Tesla also has reduced the amount of aluminum in the battery enclosure for the Model 3 and Model Y compared to what was used in its S and X models.

Why are EV battery enclosures made out of aluminum?

Suppliers of composites and plastics are undeterred by aluminum's current dominance in EV battery enclosures. They're developing new formulations and processes aimed at matching or exceeding the performance and cost-competitiveness of the light metal. "Current battery packs use a lot of metal that is not optimized.

What is an EV battery enclosure?

(Novelis) EV battery enclosures are a hotbed of subsystem design, materials innovation, and vehicle integration. The importance of supporting and protecting the EV battery has kicked off a new wave of creativity among engineers and materials scientists."
