

New Energy Storage Inspection and Maintenance

Can predictive maintenance be used to manage energy storage systems?

Part 1 of this 3-part series advocates the use of predictive maintenance of grid-scale operational battery energy storage systems as the next step in safely managing energy storage systems. At times, energy storage development in the electric power industry has preceded the formulation of best practices for safety and operating procedures.

What are the NFPA standards for energy storage systems?

Two of the most notable standards in the United States are Underwriters Laboratories (UL) 9540 (Standard for Energy Storage Systems and Equipment) and National Fire Protection Association (NFPA) 855 (Standard for the Installation of Stationary Energy Storage Systems).

Are energy storage safety incidents a threat to first responders?

However, safety incidents in the field have still led to total BESS destruction and posed risk to first responders. Despite the efforts of the energy storage industry to improve system safety, recent incidents show the need for a greater recognition of the limitations of current practices.

Why is maintenance and operation of substation equipment important?

The maintenance and operation of substation equipment was an important task in power grid operation. Therefore, it was necessary to strengthen the safety management of substations, do a good job in maintaining the power grid and diminish the incidence of accidents to improve the operational efficiency of the power grid.

Is there a public energy storage database?

Today, the only public energy storage database (maintained by the DOE) focuses primarily on installations, technologies, and applications of energy storage. Creating a clearinghouse of fault information and issues is a more complicated request.

What are the guidelines for battery management systems in energy storage applications?

Guidelines under development include IEEE P2686 "Recommended Practice for Battery Management Systems in Energy Storage Applications" (set for balloting in 2022). This recommended practice includes information on the design, installation, and configuration of battery management systems (BMSs) in stationary applications.
