

What is electrochemical energy storage?

As a constituent part of the energy storage system, electrochemical energy storage is a kind of devices that use chemical reactions to directly convert electrical energy. The electrode material determines the energy density and electrochemical properties of the battery.

What are electrochemical energy storage and conversion technologies?

Owing to the intermittent and fluctuating power output of these energy sources, electrochemical energy storage and conversion technologies, such as rechargeable batteries, electrochemical capacitors, electrolyzers, and fuel cells, are playing key roles toward efficient and sustainable energy utilization (1,2).

Are rechargeable batteries the future of energy storage?

Rechargeable batteries are promising electrochemical energy storage devices, and the development of key component materials is important for their wide application, from portable electronics to electric vehicles and even large-scale energy storage systems.

Which energy storage devices use porous carbons?

This review summarizes progress in the use of porous carbons in different energy storage devices, such as lithium-ion, lithium-oxygen, lithium-sulfur, and lithium-metal batteries for anode protection, sodium-ion and potassium-ion batteries, supercapacitors and metal ion capacitors.

Why are porous carbons used in electrochemical energy storage?

Porous carbons are widely used in the field of electrochemical energy storage due to their light weight, large specific surface area, high electronic conductivity and structural stability. Over the past decades, the construction and functionalization of porous carbons have seen great progress.

Can Li-S batteries be used in a next-generation electrochemical energy storage system?

Li-S batteries have high theoretical specific energy of 2600 Wh kg⁻¹ and considered as potential candidates for the next-generation electrochemical energy storage system. However, the sluggish kinetics and shuttling effects hinder the practical applications of Li-S batteries.
