Can UTHPs be used to heat dissipate DC EV charging piles?

The UTHP was especially suitable for the heat dissipation of electronic equipment in narrow space. Thus it could be directly attached to the surface of the electronic components to cool the heat source. However, few researches reported on the application of UTHPs to the heat dissipation of the DC EV charging piles. Fig. 1.

Do UTHPs enhance the heat dissipation capacity of the charging module?

The heat dissipation performance was evaluated by the peak temperature and temperature uniformity on the chip surface. According to the simulation results, the following conclusions can be drawn: UTHPs could significantly enhance the heat dissipation capacity of the charging module.

In order to reduce the operation temperature of the charging pile, this paper proposed a fin and ultra-thin heat pipes (UTHPs) hybrid heat dissipation system for the direct-current (DC) charging pile. The L-shaped ultra-thin flattened heat pipe with ultra-high thermal conductivity was adopted to reduce the spreading thermal resistance. ICEPAK ...

Compared to other power sources, EV charging piles (also known as EV charging stations or EV charging points) generate significantly more heat, making the thermal design of these systems extremely stringent. The power range of DC EV chargers typically falls within 30KW, 60KW, and 120KW, with efficiency generally
