

# New energy storage promotion

What is new energy storage?

New energy storage, or energy storage using new technologies such as lithium-ion batteries, liquid flow batteries, compressed air and mechanical energy, is an important foundation for building a new power system in China, enjoying the advantages of quick response, flexible configuration and short construction periods.

When will energy storage be commercialized?

From 2016 to 2020, the goal is to build energy storage demonstration projects with commercial purposes. This marks the development of energy storage into the early stages of commercialization. During this period, the management system, incentive policies and business models of energy storage were mainly explored.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Will the energy storage industry thrive in the next stage?

The energy storage industry is going through a critical period of transition from the early commercial stage to development on a large scale. Whether it can thrive in the next stage depends on its economics.

How to promote the implementation of independent energy storage stations?

To promote the implementation of independent energy storage stations, it is necessary to further optimise the electricity market mechanism, segments and targets. Investor participation is beneficial for the development of the energy storage industry.

When will energy storage enter the stage of large-scale commercialization?

It is expected that from 2021 to 2025, energy storage will enter the stage of large-scale development and have the conditions for large-scale commercialization. The context of the energy storage industry in China is shown in Fig. 1.

New energy storage, or energy storage using new technologies such as lithium-ion batteries, liquid flow batteries, compressed air and mechanical energy, is an important foundation for building the country's new power system, which enjoys advantages such as quick response, flexible configuration and short construction timelines.

Storage of energy will help in bringing down the variability of generation in RE sources, improving grid stability, enabling energy/ peak shifting, providing ancillary support services and enabling ...

About 97 percent of China's new energy-storage facilities used lithium batteries in 2023. Recognizing the

diverse scenarios and needs in power systems, China is ...

Annual new installations of new energy storage. Currently, the United States, Europe, Japan, South Korea and other major economies focus on the development of new energy storage industry as a national or regional ...

Storage of energy will help in bringing down the variability of generation in RE sources, improving grid stability, enabling energy/ peak shifting, providing ancillary support services and enabling larger renewable energy integration. Storage Systems will also benefit consumers by bringing down peak deficits,

China aims to further develop its new energy storage capacity, which is expected to advance from the initial stage of commercialization to large-scale development by 2025, with an installed capacity of more than 30 million kW, and realize full market-oriented development of new energy storage by 2030, according to the National Development and ...

effectiveness of energy storage technologies and development of new energy storage technologies. 2.8. To develop technical standards for ESS to ensure safety, reliability, and interoperability with the grid. 2.9. To promote equitable access to energy storage by all segments of the population regardless of income, location, or other factors.

Energy storage is by no means a new topic of discussion, but its importance in the renewable energy mix seems to be growing year-on-year. Now, it seems that we still have a ways to go if we're to achieve EU's energy and climate targets, namely obtaining energy security and the decarbonization of the sector.

About 97 percent of China's new energy-storage facilities used lithium batteries in 2023. Recognizing the diverse scenarios and needs in power systems, China is encouraging technological innovation in new energy storage, achieving ...

China aims to further develop its new energy storage capacity, which is expected to advance from the initial stage of commercialization to large-scale development by 2025, with an installed capacity of more than 30 million ...

Stepping up efforts to develop new energy storage technologies is critical in driving renewable energy adoption, achieving China's 30/60 carbon goals, and establishing a new power system.

With the proposal of the "carbon peak and neutrality" target, various new energy storage technologies are emerging. The development of energy storage in China is ...

The NDRC said new energy storage that uses electrochemical means is expected to see further technological advances, with its system cost to be further lowered by more than 30 percent in 2025 compared to the level at the end of 2020. Analysts said accelerating the development of new energy storage will help the country achieve its target of peaking carbon ...

## New energy storage promotion

The plan specified development goals for new energy storage in China, by 2025, new energy storage technologies will step into a large-scale development period and meet the conditions for large-scale commercial ...

The promotion of independent storage sites to participate in the electricity market and cooperate with peak regulation will be accelerated, when independent storage power sites transmit power to the grid, they do not need to pay the transmission and distribution ...

By the end of 2023, the cumulative installed capacity of new energy storage projects that have been completed and put into operation in China will reach 31.3GW/66.9GWh. Looking forward to 2024, China's energy storage industry will continue to develop rapidly under the continuous promotion of the '14th Five-Year Plan'; energy storage development ...
