

# Nordic household energy storage plug types

Norway mainly uses the electric plug type called Type F (Schuko) with 230 V voltage and 50 Hz frequency. These are compatible with electronics that use Type F, Type C and Type E. All other types need an adapter or even converter.

To determine whether you need a power adapter for your trip to Norway, consider the type of plugs and voltage used in your home country compared to what is used in Norway. Norway uses power plugs and sockets of Type C and Type F, with a ...

Mostly uses Type C, E, F, J, K, and L plugs. Type C is a simple two-pin plug. Types E and F have two round pins with grounding variations. Voltage is typically 230V and the frequency is 50Hz. United Kingdom. Uses Type G plugs. These have three rectangular pins. A fuse is built into the plug itself. The voltage is 230V and the frequency is 50Hz.

When you are going on a trip to Norway, be sure to pack the appropriate travel plug adapter that fits the local sockets. But what do those electrical outlets look like? In Norway, types C and F are the official standards. Like almost all Continental European countries, Norway has standardized on the German plug and socket system.

In Copenhagen and Denmark in general, we use Type C, E, F and K plugs. Those are the ones with two round pins. The type C plug is also called the Euro-plug and is used in the most part of Europe and actually the whole world - except from noteworthy United Kingdom, North America, Australia, Japan and some more.
