DIY solar panel kits are around the price of purchasing the panels through an official company and having one of their electricians install them. The average price for a DIY kit including 16 panels is around EUR6,250.

NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up approach.

To determine the costs of a photovoltaic farm, it is first important to identify the factors that affect them. The initiators of a solar energy project should clearly understand what the investment process looks like and how much work needs to be done in order for this type of project to work properly and bring long-term profit.

IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies "Thin film a-Si/u-Si or Global Price Index (from Q4 2013)".
