5 ???· In this paper, we propose a complete modelling framework to value several batteries in the electricity intraday market at the trading session scale. The model consists of a stochastic model for the 24 mid-prices (one price per delivery hour) combined with a deterministic model for the liquidity costs (representing the cost of going deeper in the order book). A stochastic ...

(Ferro et al., 2021) focused on the existence of mixed channels for enterprise decision-making and compared pricing and profit distribution with game theory under the balance of marketing decision variables. Based on the researches on government subsidies in closed-loop supply chain model, the paper will analyze and compare the relationship between the price ...

If one team member is slower, the entire team must adjust its pace to match, reducing overall performance. Similarly, weaker batteries in a mixed pack limit the performance of stronger ones, creating inefficiencies and risks.

More specifically, the results indicate, that FCEB are a viable technology to supplement full electric bus fleets as soon as the costs for FCEB fall below 625,000 EUR or the costs for hydrogen fall below 4.33 EUR/kg H₂. Interestingly, rising energy prices would not increase the utilization of FCEBs, but rather influence the choice of BEB-types. 1.
