Are lithium-ion batteries sustainable?

Lithium-ion batteries offer a contemporary solution to curb greenhouse gas emissions and combat the climate crisis driven by gasoline usage. Consequently, rigorous research is currently underway to improve the performance and sustainability of current lithium-ion batteries or to develop newer battery chemistry.

Why are lithium-ion batteries used in electric vehicles & energy storage stations?

In the backdrop of the carbon neutrality, lithium-ion batteries are being extensively employed in electric vehicles (EVs) and energy storage stations (ESSs). Extremely harsh conditions, such as vehicle to grid (V2G), peak-valley regulation and frequency regulation, seriously accelerate the life degradation.

Why are lithium-based batteries important?

Lithium-based batteries are essential because of their increasing importance across several industries, particularly when it comes to electric vehicles and renewable energy storage. Sustainable batteries throughout their entire life cycle represent a key enabling technology for the zero pollution objectives of the European Green Deal.

Are long-life lithium-ion batteries important?

In summary, with the widespread adoption of lithium-ion batteries, the development of long-life batteries has become critical scientific issues in the current battery research field. This paper aims to provide a comprehensive review of long-life lithium-ion batteries in typical scenarios, with a primary focus on long-life design and management.

How to recycle lithium ion batteries?

The three major technical means of recycling available include [63,66]. The pyrometallurgical process (In this stage, the component metal oxides from lithium-ion batteries are reduced in a high-temperature furnace to form an alloy. The primary procedures are roasting and calcination)

Is the recycling rate of lithium batteries a challenge to sustainability?

The low recycling rate of lithium batteries poses a significant challenge to sustainability. The ESG rating system, which measures corporate practices in environmental, social, and governance areas, is crucial to stakeholders but currently inadequate in addressing the recycling issue.
