How do you connect an RV generator to an inverter?

Detach the power connection from the RV generator and shore power. The positive (red) cable's one end will go to the fuse holder and the other to the positive side of the battery or busbar terminal. The negative (black) cable's one end will go to the inverter's negative side and the other end to the vehicle's earth point or the earth busbar.

Can you add a controller to a solar inverter?

Adding a controller, a 30A or 50A switch, or a solar panel won't change the basic connection process. The inverter still needs to go through a fuse or circuit breaker, be properly grounded, and connect to the battery terminals. If you're working in a tight space, consider using a thick board to stabilize the inverter while mounting.
