

# Ranking of household energy storage systems in the Democratic Republic of Congo

What is the main priority for the Democratic Republic of Congo's power sector?

The main priority for the Democratic Republic of Congo's power sector is to increase access to electricity. The Democratic Republic of Congo is a large country with 10 million households of which 1.6 million have access to electricity. This makes it the third largest population in the world without access to electricity.

How much would it cost to get grid electricity in DRC?

Providing all households of the 26 provincial capitals of DRC access to grid electricity through a mix of mid-sized hydro and solar power plants would cost approximately USD 10.5 billion in CAPEX. This would raise the access rate to about a third of the population, at a cost equivalent to 30% of GDP.

Why does DRC have a high electricity demand?

All segments of electricity demand are severely constrained by supply. Most demand in the residential sector is unmet, partly because DRC has one of the largest deficits in electricity access in the world and high geographical disparities (see chapter 2 for information about access). So is industrial demand.

How much money does a solar power plant cost in DRC?

The investment needs of the sector vastly exceed the government's fiscal capacity, and major efforts to attract private capital and operators are needed. Providing all households of the 26 provincial capitals of DRC access to grid electricity through a mix of mid-sized hydro and solar power plants would cost approximately USD 10.5 billion in CAPEX.

Could the Congo become an electricity exporter?

Almost all electricity generation today comes from hydropower and the Inga project has the potential to provide much more. If network constraints are addressed, Democratic Republic of the Congo could become an electricity exporter.

Is DRC a poor country?

DRC has one of the highest fertility rates in the world (after Niger and Somalia)<sup>6</sup> and DRC residents are some of the poorest in the world, with 91 percent of the population living on less than \$3.10 per day in 2012 (2011 PPP) (Map 4).

Introduction: Household waste management is a multidimensional challenge faced by urban authorities, especially in developing countries like the Democratic Republic of Congo (DRC). This study aims ...
