What is battery pack price?

IEA analysis based on data from Bloomberg and Bloomberg New Energy Finance Lithium-Ion Price Survey (2023). "Battery pack price" refers to the volume-weighted average pack price of lithium-ion batteries over all sectors. Price of selected battery materials and lithium-ion batteries,2015-2024 - Chart and data by the International Energy Agency.

How have lithium-ion battery prices changed over the last 10 years?

Lithium prices, for example, have plummeted nearly 90% since the late 2022 peak, leading to mine closures and impacting the price of lithium-ion batteries used in EVs. This graphic uses exclusive data from our partner Benchmark Mineral Intelligence to show the evolution of lithium-ion battery prices over the last 10 years.

What's going on with battery raw material prices?

Get up-to-speed with our battery raw material prices, news, trends and forecasts. The price of lithium is falling, but some Western companies have recently announced more investments in the Lithium Triangle - a region of South America comprising parts of Argentina, Chile and Bolivia.

How much does a lithium ion battery cost?

Currently, 54% of the cell price comes from the cathode, 18% from the anode, and 28% from other components. The average price of lithium-ion battery cells dropped from \$290 per kilowatt-hour in 2014 to \$103 in 2023. In the coming months, prices are expected to drop further due to oversupply from China.

What is the difference between lithium ion battery prices and nickel prices?

Data until March 2023. Lithium-ion battery prices (including the pack and cell) represent the global volume-weighted average across all sectors. Nickel prices are based on the London Metal Exchange, used here as a proxy for global pricing, although most nickel trade takes place through direct contracts between producers and consumers.

Why are battery metal prices so low?

Battery metal prices have struggled as a surge in new production overwhelmed demand, coinciding with a slowdown in electric vehicle adoption. Lithium prices, for example, have plummeted nearly 90% since the late 2022 peak, leading to mine closures and impacting the price of lithium-ion batteries used in EVs.
