

# Should we install solar energy now

Should I install solar now or wait?

There is this huge stigma that waiting for the price of solar to come down is the best thing to do. Evidence shows that the cost of solar panels is decreasing every single year, making them more and more affordable for homeowners.

Why should you wait to install solar panels?

Waiting to install solar panels means waiting to save money on your energy bill, which will continue to rise over time. We have just seen an increase in electricity price throughout the entire year of 2022. Cold weather in February last year, has led to natural gas price spikes and decreased wind energy production.

Should you consider going solar?

The cost of solar has declined by 3.3% on EnergySage over the past five years, but there has been a recent spike due to lingering pandemic-related supply chain constraints. You may pay a premium if you decide to go solar now. Going solar is a big expense, so it's important to consider the current market conditions.

Should you wait before going solar?

The cost of solar has dropped by about 3.3% over the past five years. Waiting to go solar may result in missing out on current incentives and higher electricity costs in the future. By going solar now, you can lock in current incentives and protect yourself from rising electricity costs.

Should you lease or buy a solar installation?

Leasing is commonly marketed as a way to finance a solar installation for those who aren't using cash. The benefit of leasing--usually a 20-year commitment--is that you put no money down. Your energy bills are instantly lower, based on a formula the solar provider devises. Maintenance is handled by the solar company as well.

Is it a good time to use solar energy?

Experts say it's a good time for many homeowners to harness solar energy. Though solar power may not work for every home, when it does it can drastically cut home heating bills and lessen damage to the environment caused by the burning of fossil fuels.
