What is a load in a solar PV system?

A load in the solar PV system refers to the amount of power your devices consume at home. Knowing how much load your home needs to run is helpful when determining the number of solar panels you need to install. For example, how many solar panels do you need if your solar PV system powers a 10W phone, a 100W dishwasher, and 50W LED light bulbs?

Can a solar panel be directly loaded?

Solar panel direct load only works with a motor, solar powered fan or water pump. Most electronics and appliances cannot be directly loaded because they are sensitive to voltage fluctuations. Doing so could damage the load and the panels. Hooking up solar power directly to load creates many potential problems for electronics.
