Therefore, the fire suppression devices configured for energy storage systems must swiftly suffocate fires by isolating oxygen through physical means. The most widely used fire suppression gas in the energy storage system industry is Perfluorohexane (FK-5-1-12). FK-5-1-12 is a clear, colorless, slightly sweet-smelling liquid extinguishing agent ...

The pressurized type fire extinguisher is filled with nitrogen gas as a pressure source to drive the fire extinguishing agent. There is a gas-producing agent in the non-pressure storage tank, which is generally pressure-free. When the product is started, the gas-producing agent will push the fire-extinguishing agent out of the nozzle.

For fire safety reasons, we not only need to install small fire extinguishing systems on lithium-ion battery packs but also install large fire extinguishing systems in energy storage containers. A comprehensive container-type energy storage system includes energy storage containers, energy storage cabinets, lithium battery packs, and batteries.
