What is compressed air energy storage?

Compressed air energy storage (CAES) is one of the many energy storage options that can store electric energy in the form of potential energy (compressed air) and can be deployed near central power plants or distribution centers. In response to demand, the stored energy can be discharged by expanding the stored air with a turboexpander generator.

Can compressed air energy storage detach power generation from consumption?

To address the challenge, one of the options is to detach the power generation from consumption via energy storage. The intention of this paper is to give an overview of the current technology developments in compressed air energy storage (CAES) and the future direction of the technology development in this area.

What is the thermodynamic analysis of a compressed air energy storage system?

The study presented by Wu et al. describes the thermodynamic analysis of a novel compressed air energy storage system powered by renewables. The thermal storage in this system is realized in the form of thermochemical storage,utilizing the process of the reduction of Co 3 O 4 to CoO.

Who contributed to the study of compressed air energy storage?

All authors contributed to this work in collaboration. Jidai Wang,Kunpeng Lu and Jihong Wangconducted a wide search of literature in compressed air energy storage and performed their analysis. All the authors contributed to the discussion, information collection and the manuscript preparation. The authors declare no conflict of interest.

What is the history of compressed air energy storage?

The compressed air energy storage (CAES) was introduced in the late '70s. The first large scale facility was built in 1978 in Huntorf,Germany (290 MW/480 MWh) [33,34]. A few years later,the currently largest installation was built in McIntosh,Alabama,US (110 MW/2700 MWh)

Is there a future for compressed air storage?

There are two large scale compressed air storage plants are in operation and their success encourages the technology development. A number of pilot projects in building new generation of CAES are on-going. All the projects have demonstrated the difficulties in financial investment.
