Battery testing is best left to the professionals, and the trained technicians at Jiffy Lube have advanced testing equipment to help determine the root of the problem.

What does a battery warning light mean?

The battery warning light is a light in the shape of a battery symbol. If you start your car and the battery light appears, there's no underlying issue. It's normal for the light to show when you first turn on your car - it'll disappear after some seconds. However, if it appears on your dashboard while driving, you must act.

What does a battery light mean on a car?

Loss of power: The battery light indicates a problem with the battery or charging system. If the alternator is not charging the battery, the car will eventually run out of electrical power. This can lead to the vehicle stalling and can cause a breakdown. Damage to other components: Ignoring the battery light can result in more severe damage.

How does a mechanic diagnose a battery light?

Here's how a mechanic will diagnose your battery light: 1. Inspect the Battery In some vehicles, hydrogen gas from the battery acid can cause corrosion on the terminals, especially in warm climates. Your mechanic will remove the battery terminal covers and look for white or greenish substances to check if your terminals are corroded.

How do I know if my car battery light is working?

First, determine whether the battery light is only illuminating for a few seconds or if it is staying on continuously. It's normal for the light to illuminate for a moment when you start your car, and it will usually extinguish shortly after.

Why is my car battery light on?

It's normal for the light to show when you first turn on your car - it'll disappear after some seconds. However, if it appears on your dashboard while driving, you must act. It means the charging system isn't working. Therefore, the car isn't getting enough voltage from the battery to operate normally. Is It Safe to Drive with The Battery Light On?
