

The principle and structure of solar power generation equipment

What is a basic solar power system?

Therefore, this article will explore the fundamentals of a basic solar power system. In a typical solar power generation system, the sunlight strikes the solar panels, generating DC electricity in the photovoltaic (PV) cells. The DC voltage travels through cables to the inverter and the inverter converts the DC electricity into AC electricity.

How does a solar power system work?

In a typical solar power generation system, the sunlight strikes the solar panels, generating DC electricity in the photovoltaic (PV) cells. The DC voltage travels through cables to the inverter and the inverter converts the DC electricity into AC electricity. The AC voltage can then be used to power home or business appliances.

How solar energy is generated?

The PV technology convert visible spectrum to electricity and thermal collectors use both infrared and visible spectrum for energy generation. So the energy generation from solar radiation can be in the form of electrical energy or thermal Energy. The various conversion paths of solar energy is described in the Fig.2

What is solar energy?

Solar energy is a renewable and sustainable form of power derived from the radiant energy of the sun. This energy is harnessed through various technologies, primarily through photovoltaic cells and solar thermal systems.

What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

What are the components of a photovoltaic power plant?

A photovoltaic power plant consists of several components, such as: Solar modules: The basic units of a PV system, made up of solar cells that turn light into electricity. Solar cells, typically made from silicon, absorb photons and release electrons, creating an electric current.
